Dow Jones Industrial Average Alcança 40.000 Pontos pela Primeira Vez

O Dow Jones Industrial Average passou pela primeira vez a marca de 40.000 pontos na terçafeira, alimentado por fortes resultados trimestrais de empresas americanas e aumento das apostas **betmotion cnpj** cortes de juros pela Reserva Federal dos Estados Unidos.

O índice duplicou seu valor desde a primavera de 2024, quando a Organização Mundial da Saúde declarou a COVID-19 como uma pandemia global. O surto fechou negócios **betmotion cnpj** todo o mundo à medida que o número de mortos aumentava. Em **betmotion cnpj** esteira, surgiram problemas de cadeia de suprimentos que levaram a inflação acelerada.

Os Estados Unidos apresentaram uma recuperação notável, apesar de previsões generalizadas de desastre diante de preços **betmotion cnpj** alta e uma série agressiva de aumentos de juros de banco central, visando conter a inflação.

Na quarta-feira, os dados governamentais mostraram que a taxa anual de inflação, que atingiu um pico de mais de 9% **betmotion cnpj** junho de 2024, desacelerou para 3,4% **betmotion cnpj** abril, **betmotion cnpj** comparação com 3,5% no mês anterior.

A taxa ainda está muito acima da meta da Reserva Federal de 2% de inflação anual, mas os detalhes do relatório animaram os investidores e aumentaram as expectativas de que o banco central começará a reduzir as taxas de juros mais tarde este ano.

O Dow é um índice de 30 das principais empresas dos Estados Unidos, incluindo Amazon, Apple, McDonald's e Nike. As esperanças de que a inteligência artificial gere uma nova onda de inovação tecnológica – e riqueza – e uma série de relatórios positivos de empresas do Dow impulsionaram o índice.

Na terça-feira, outra de suas constituintes, o gigante varejista Walmart, divulgou resultados trimestrais melhores do que o esperado, ajudando o Dow a superar a marca dos 40.000 pontos.

John Lynch, chefe de gestão de investimentos da Comerica Wealth Management, elogiou a subida do Dow para 40.000 pontos, dizendo à CNBC: "Este marco é um testemunho dos poderes da formação de capital, inovação, crescimento de lucros e resiliência econômica."

O aumento do mercado de ações ocorre à medida que os Estados Unidos continuam a apresentar forte crescimento no mercado de trabalho. O desemprego permanece abaixo de 4% há mais de dois anos – a sequência mais longa desde os anos 1950.

No entanto, apesar dos mercados de ações **betmotion cnpj** alta e do desemprego baixo, a confiança dos consumidores caiu, chegando ao seu nível mais baixo **betmotion cnpj** seis meses, de acordo com uma pesquisa da Universidade de Michigan com consumidores divulgada anteriormente neste mês.

"Embora os consumidores tivessem mantido um certo otimismo nas últimas poucas mês O nce upon a time, every new superhero movie seemed to exist in (not-so) splendid isolation. Michael Keaton's Batman never met Christopher Reeve's Superman, despite the cities of Gotham and Metropolis being situated less than 300 miles apart in many DC comic book tales. When Sony's Spider-Man found himself under threat from the likes of the Green Goblin, Doc Ock and even a nefarious Symbiote in the early to mid-noughties Tobey Maguire films, he did not dial up Iron Man or send an email into space for the attention of one Thor Odinson of Asgard – because those characters were inconveniently owned by someone else. Only in the comics was Ant-Man likely to bump into the Hulk, or Mister Fantastic make the acquaintance of Captain America. It was Marvel Studios, beginning with 2012's The Avengers, that popularised a brave new world of interconnected superheroes who, in many ways, broke all the rules of superhero film-making. Suddenly, heroes and villains were capable of extended, multiple episode character arcs that added a richness and realism to proceedings that had rarely been seen before. Iron Man might just have invented time travel, but on a psychoanalytic level he felt like a real person capable of genuine human emotions, soaring success, abject failure ... ahem, casual sexism ... and everything in between. Each new superhero to emerge fully formed into the Marvel multiverse felt intelligently connected to all the others, ripples in the fabric of reality in one corner of the multiversal web somehow affecting matters somewhere else entirely in unexpected ways (at least until the more recent, weaker films).

All of which might leave us wondering exactly why Marvel supremo Kevin Feige has just revealed that the new Fantastic Four film, in which Reed Richards, the Invisible Woman, the Human Torch and the Thing are about to debut for Marvel movies, will take place (at least initially) somewhere that does not seem to be in the MCU at all. Speaking on the latest episode of the Official Marvel Podcast, Feige confirmed suggestions that the film will be set in the 1960s, but hinted heavily that this will be a very different version of 20th-century. terrestrial reality to any we've yet seen.

"It is a period film," said Feige. "There was another piece of art we released with Johnny Storm flying in the air, making the 4 symbol and there was a cityscape in the corner of the image. And there were a lot of smart people who noticed that the cityscape doesn't look exactly like the New York that we know or the New York that existed in the '60s in our world. Those were smart observations."

This is nothing new for Marvel, in a sense. The advent of alternate realities in episodes such as Spider-Man: No Way Home and Doctor Strange in the Multiverse of Madness, not to mention the TV series Loki, means we're used to seeing our heroes jumping from one universe to the next. Moreover, the absence of the Fantastic Four from the MCU would explain why nobody has ever mentioned them up until now. And yet if Feige really is hinting that the team will begin their journey in a different universe to the Earth 616 we've become used to, and which so closely resembles our own without the superheroes, this is still something new and different.

Rather than starting out in our own world, these are superheroes from another universe who are (presumably) likely at some stage to make the time and reality jump so that they interact with the characters we already know. That is after all, kind of the point of Marvel on the big screen, even to the extent that we now have superheroes who once existed in entirely different film series – Spider-Man and his various enemies in No Way Home; Deadpool and Wolverine in the forthcoming Shawn Levy film – happily fistbumping the MCU crew.

Of course, Marvel might just do something truly original here and keep the awesome foursome trapped in their own world, despite the fact that they have every means of bringing them into the big, multiversal picture. Who wouldn't want to explore a super-stylised, fantasy take on the 1960s where everything is slightly different from our own world, in appealingly far-out and intriguing ways? Maybe the Beatles are all Martians – who knows how weird this stuff could get? But

wouldn't that, in a sense, be cheating, given how Marvel has spent all its time and effort since 2008's Iron Man convincing us that everything is connected, to the extent that every other studio making superhero movies has become too embarrassed to do anything but mimic its more successful rival?

The short odds are on the Fantastic Four making the leap pretty quickly. It might not happen in the space of a single movie but, when it does, the results could be seismic – or at least amusing. For if advance publicity really does offer a realistic look at the groovy retro world where the quartet begin their journey, this is going to be the nuttiest fish-out-of-water tale since Arnold Schwarzenegger went chariot racing and fought a bear in Central Park in 1970's Hercules in New York.
