HM Cloud: hands in the cloud from Holdem Manager
Holdem Manager announced the launch of
the HM Cloud service, which is "the first of its kind in the cloud with an integrated
heads-up display."
HM Cloud benefits
Thanks to the new service, users will not have to
download databases to their computers - all hands will be stored in the cloud. The
launch of such a service is a rather bold step that can significantly change the world
of modern poker.
If your computer slows down while running Holdem Manager or other
software, the situation can be significantly improved by using HM Cloud. The official
announcement says: "HM Cloud does not require your computer resources to perform single
calculations and search statistics for a player or his opponents. The local HM Cloud
client is installed on the computer and has two main functions: (1) sends new hand
histories to HM Cloud; (2) gets updated HUD data from HM Cloud and displays it at your
table."
Requirements for installing HM Cloud
The requirements for installing HM Cloud
are minimal - the software installation process is quite simple. In addition, you do
not in any way clog the computer memory and do not overload it with additional options.
HM Cloud can be accessed from any device connected to the Internet. That is, from a
practical point of view, you can sit at any computer and still be able to use all the
stats in the usual format.
HM Cloud works right in the browser, so it is kind of
standardized for various OSs, including Windows and Linux. That is, no matter what
computer you use and how perfect it is, HM Cloud will always be at your fingertips. The
official announcement also says: "HM Cloud HUD for Mac users is scheduled to launch in
the near future. Since all processes, statistics generation and hand history storage
are performed on the HM Cloud servers, a minimum of memory and processor resources of
the user's local computer is used, even when playing at several tables."
Holdem Manager
is currently launching HM Cloud for alpha testing. The service is available only at

cash tables at PokerStars and only for users of the Google Chrome browser. By the time HM Cloud hits the market in a full version, the service compatibility will be more
 extensive.
The data stored in the cloud service will be private and inaccessible to the
general public. In addition, HM Cloud can be used from a mobile device.
At the moment,
the cost of using the HM Cloud service is not disclosed. On this occasion, Holdem Manager representatives noted: "As HM Cloud develops as a full-fledged product, we will be able to more adequately assess its cost. When making these kinds of decisions, we will certainly take into account the existing HM2 users. "
