Partilha de casos

O que significa 1º tempo 1x2 & ambos os times para marcar? - Um relato pessoal sobre meu primeiro acidente.

Meu dia começou como qualquer outro, lendo o jornal e observando as notícias do mercado de apostas esportivas. Aconteceu que a 1º tempo de um dos jogos mais esperados da semana estava para acontecer logo em caca níqueis gratis seguida. E eu decidi apostar no resultado "1x2" - uma opção direta na vitória da casa com empate como possível resultado.

Às 7:30, fui à casa de um amigo e nós estavam assistindo ao jogo numa sala cheia. Eu estava em caca níqueis gratis pé perto do balcão com minha aposta tachada para a casa. O primeiro tempo foi marcado por uma bela partida equilibrada. Ao final, o relógio apontava 15 minutos e nenhum gol havia sido feito.

Sudadicamente, no meio do segundo período de jogo, aconteceu um acidente inesperado. Um dos amigos de nosso grupo perdeu os equilíbrios após pular fora de seu assento para correr em caca níqueis gratis direção à televisão quando ela parou temporariamente durante uma animação no intervalo. Ele caiu e quebrou o tornozelo esquerdo, com um membro do time médico logo chegando em caca níqueis gratis seguida.

Mesmo tendo a experiência de ter sofrido acidentes antes, eu nunca percebi como poderíamos estar tão vulneráveis às situações súbitas e imprevistas da vida cotidiana. Ao refletir sobre esse incidente agora, vejo que minha aposta "1x2" teve um significado maior do que apenas marcar pontos em caca níqueis gratis uma partida de futebol.

Eu aprendi com essa experiência e percebi a importância da Written Evidence (AABI001) *The Impact of the Covid-19 Pandemic on Businesses in England and Wales: A Review by The British Chambers of Commerce*, November 2024 Executive Summary. This report is an independent review into the impact that the COVID-19 pandemic has had on businesses across all sectors in England and Wales. This report aims to provide a comprehensive overview of how different aspects of economic activity have been affected by the pandemic, with a particular focus on employment levels and changes in business models. It also considers the various policy interventions that were introduced during this time period which sought to mitigate these effects. The report covers three main areas:

Introduction The COVID-19 pandemic has had widespread repercussions for economies around the globe, with no country or sector left unaffected. This review by the British Chambers of Commerce (BCC) aims to capture the full extent and impact on businesses in England and Wales – both during lockdowns and periods of restrictions as well as when they were allowed to re-open for certain activities, through to today. The BCC is an organisation which represents over 150,000 companies across a wide variety of sectors in the UK economy. It was established nearly two centuries ago by merging three business lobby groups (the Merchants' Chamber, the London Chamber of Commerce and the Westminster Business Men). The BCC is recognised as an independent voice for businesses at both national and local level. In addition to its role in advocating on behalf of UK firms, it also provides a wealth of resources including surveys which help inform analysis such as this one. A range of research by the BCC has highlighted that Covid-19 had an adverse impact on businesses across all sectors and geographies with varying degrees of severity (BCC, 2024a; BCC, 2024b). The most recent BCC report found that in March 2024 a net total of 380,000 jobs were lost across the country. These figures are concerning and illustrate the scale to which businesses have been affected by this crisis (BCC, 2024c). Whilst much analysis has focused on firm size and sector impacts in isolation from other factors, it is clear that no two firms or sectors were unaffected. The nature of the intervention measures introduced by government also played a role – with some industries more able to operate remotely than others (BCC, 2024b). The aim of this report is not only to reflect on how businesses have been affected over time but also what lessons can be learned from the pandemic as we enter into recovery and beyond. This includes providing insight in order for policy makers to better understand which measures had a positive impact, which did not work or were even detrimental to economic activity, and where there is still room for improvement if another shock should occur (BCC, 2024b). The report draws upon existing research by the BCC in addition to new data collected from businesses across England and Wales. The findings have been compiled into three main sections: firstly, how firms were affected over time; secondly, changes that took place within individual firm models during this period (i.e., employment levels, working hours etc.); and finally, the impacts of policy interventions across sectors in order to draw out any lessons which could be useful for future crisis management. The research contained in this report has been carried out by a panel of 40 businesses drawn from different sectors, geographies and firm sizes. The findings are based on the survey responses from these business representatives as well as insights provided by BCC staff members with expertise in the areas covered within the research (BCC, 2024d). The full report can be accessed at: [This executive summary aims to provide an overview of key findings and conclusions from this review. The full report provides greater detail on our methodology as well as additional analysis across various dimensions – including comparisons with firms in other countries which are facing similar challenges \(BCC, 2024d\).](#)

Acknowledgements The BCC would like to thank all the businesses that took part in this survey and provided their insights. In addition, it is important to recognise those within government agencies who have worked tirelessly over the past few years – particularly during the pandemic period. Their efforts will be critical for future policymaking as well as ensuring a successful economic recovery moving forward (BCC, 2024d).

Written Evidence (AABI001) *The Impact of COVID-19 on Businesses in England and Wales: A Review by The British Chambers of Commerce* Introduction*** In the first half of March 2024, as businesses began to feel the impacts of the pandemic and lockdown measures were being introduced at local authority level across England and Wales, we set out with our members on an unprecedented journey. We quickly

established a network of over 175 contact points for member companies to provide us with regular updates about their experience in real time as events unfolded around them. Our Business Impact Monitoring (BIM) survey was launched and has been run every two weeks since then, allowing us to track the ongoing experiences of businesses across our membership base. The first BIM report published at the end of March 2024 found that almost all member companies were impacted by COVID-19 during this early stage in the pandemic with around 35 per cent reporting a decrease or pause to their normal activity and another quarter (24%) reporting an increase. The first full BIM report was published at the end of April, which showed further increases in both volumes of business and staffing levels since March – although there were also significant decreases reported too with around 35 per cent of members experiencing a decline or pause to their activity compared with only nine per cent reporting an increase. This report explores how the impacts on BIM respondents have evolved between April and October, as well as looking at changes in working practices since March across a number of different dimensions including: employment levels; revenue/turnover; cash flow; capital investment plans (including new product development) and business model changes. We also examine the impacts on other key stakeholders such as customers, supply chains, government policy interventions and public health measures across this period. We find that while most companies experienced some form of disruption between April to October 2024 (with 61 per cent reporting a negative impact), the overall picture has improved since the first wave in March when almost half had reported significant disruptions or challenges. The percentage experiencing any form of disruption decreased from around 75% at the end of April to just over 40 per cent by October, and more than two-thirds (69%) reported no impact whatsoever on their business during this period. In terms of employment levels, a quarter of members who were surveyed in April had taken on new staff while around one in ten had made redundancies compared to just 12 per cent making new hires and almost two-thirds reporting that they had made reductions or layoffs by October (Table 1). *** Table 1: Changes in employment levels between April and October, BIM survey respondents In terms of revenue/turnover, around one fifth reported a decline while only three per cent were reporting increases. However, since the end of August there has been some improvement with just under half reporting stable turnover or an increase compared to 67 per cent that had experienced decreases in April (Table 2). *** Table 2: Changes in revenue/turnover between April and October, BIM survey respondents Looking at cashflow issues we found around one quarter of our members reported having problems with their cash flow by the end of April – a figure which remained relatively stable over time. This compares to just 12 per cent reporting that they were able to meet all their payments and almost half (46%) said they had experienced difficulties at this point in time. *** Table 3: Cashflow issues, BIM survey respondents Table 3 above also shows an increase of the percentage of members who reported having access to cash flow support since April – from just under one third (29%) reporting no assistance to around three-quarters (76%) in October. This was driven by a significant number of companies accessing the Coronavirus Business Interruption Loan Scheme and the Bounce Back Loan Scheme, which have been widely successful for small businesses across the country (BCC/Barclay 2024***). In terms of investment plans our respondents were more optimistic than in April. We found a decrease from just under half who said they had no plans to make any capital expenditure to two-thirds saying that they did plan new investments – however, around 75 per cent also reported planning some sort of change to their business model by October (Table 4). *** Table 4: Plans for Capital Expenditure and Business Model Changes, BIM survey respondents Although most companies had no plans at the end of April to make any changes to their business models we did find that over half planned some form of change by the time they completed their October surveys. We also found a significant increase in firms reporting intentions to invest in technology (from 19 per cent to nearly two-thirds). Increases were also reported in areas including new product development, expanding into new markets and increased staff training (Table 5). *** Table 5: Plans for Business Model Changes and Technology Investment, BIM survey respondents We have found that the introduction of government policy measures throughout this period has had a positive impact on our members. Government schemes such as business grants to support employment and furlough payments were widely used by firms across all sectors and sizes – with

around 78 per cent having claimed for any form of grant or payment (Table 6). *** Table 6: Claiming Government Grants/Schemes, BIM survey respondents We also asked members to rate the impact that different policy measures had on their businesses and our research found a high level of satisfaction with government interventions – particularly around grants for employment support (82 per cent reporting positively), furlough payments (79 per cent) as well as changes in VAT rates (64%). We also saw some improvement from April to October when it came to firms' experiences of dealing with local authorities and planning permits – although this was still a challenging area for many companies. *** Table 7: Impacts of Government Policy on Businesses, BIM survey respondents Although our findings suggest that the impacts on businesses have improved overall since April when we first started to collect data in March, there are clearly still some areas where firms continue to face significant challenges. The disruptions caused by lockdown measures and continued restrictions have taken a major financial and operational toll on many companies – particularly smaller ones with limited access to support schemes which were introduced at the start of this pandemic. *** Table 8: Overall Impacts since March, BIM survey respondents Our findings find that while we have seen a positive increase in revenue/turnover and cash flow among our membership base between April to October – it remains significantly below the level of performance expected pre-Covid. This is not surprising given the significant impacts on supply chains, customer behaviour and general demand for goods and services during this period. We also find that while some companies have managed to make changes to their business models or invest in technology since March – only around 40 per cent of firms reported no plans at all (Table 9). This shows that many had continued with a 'do whatever we can' approach during the pandemic and was likely driven by continuing uncertainty over what the future held. *** Table 9: Plans for Business Model Changes, BIM survey respondents We also find that while government interventions have made it easier to keep businesses afloat in many instances – there were still significant challenges around getting local authorities and planning bodies to work with firms on their plans. This has been particularly the case when dealing with permits or other forms of approvals required to restart operations, which our members told us was a major concern for them. *** Table Market: In April 2024 we conducted an extensive online survey across all sectors of UK plc and asked over 3,000 senior decision makers what impact they thought Brexit would have on their businesses – covering issues including the economy, productivity, investment, employment and export performance.

Based on the information given above, please answer: "What is the most significant challenge for UK firms since March 2024?"

Expanda pontos de conhecimento

O que é o mercado 1X2 em caca níqueis gratis apostas desportivas?

O mercado 1X2 apresenta uma forma direta de apostar no resultado de um jogo. O 1 representa a vitória do time da casa, o X denota o empate, e o 2 indica a vitória da equipe visitante.

O que significa "Ambas Equipes Marcam" em caca níqueis gratis apostas desportivas?

Resultado Final e Ambas Equipes Marcam
